## 在 Eclipse 中调试 Maven/Tycho 插件的完整步骤

### 方法一：使用 Eclipse Application 启动配置（推荐）

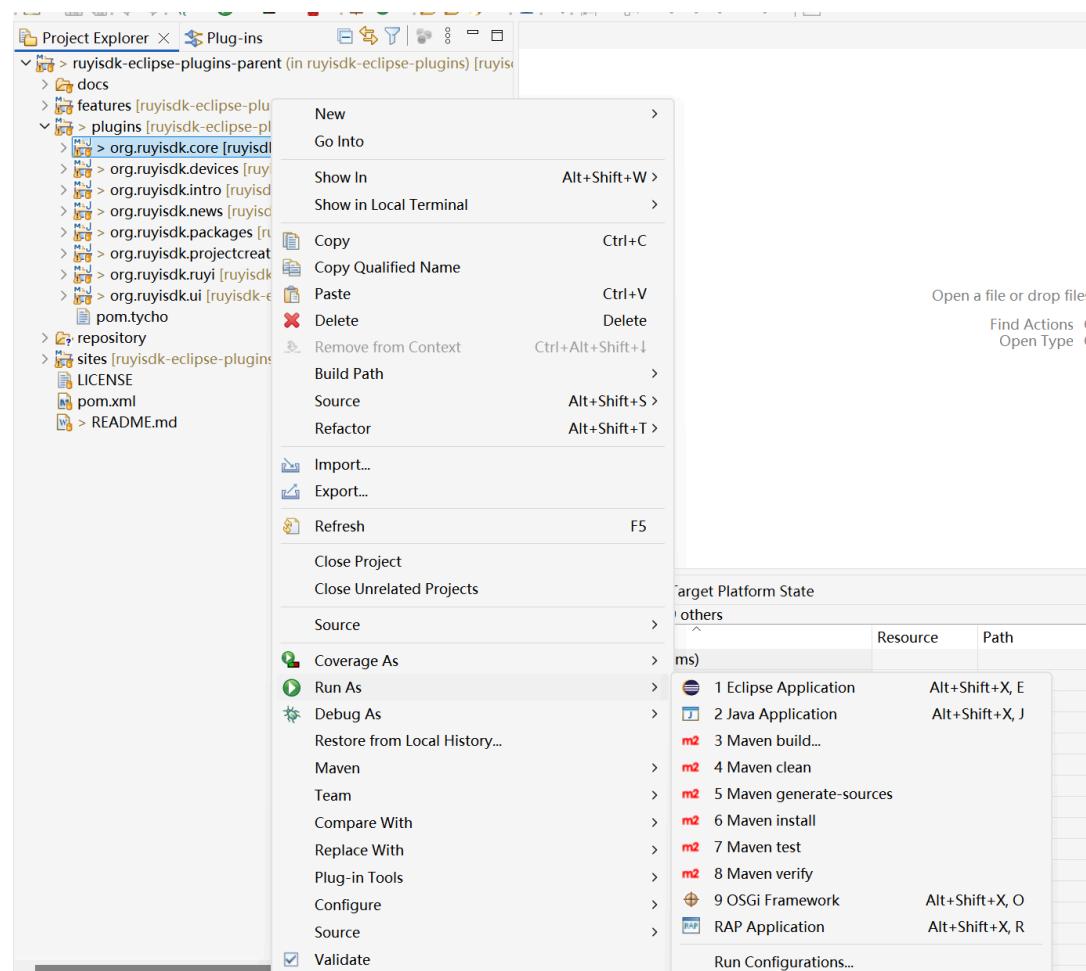

#### 1. 导入项目到 Eclipse

- `File` → `Open Projects from File System` → `Directory`
- 选择 `ruyisdk-eclipse-plugins` 目录
- 确保所有子模块都被导入

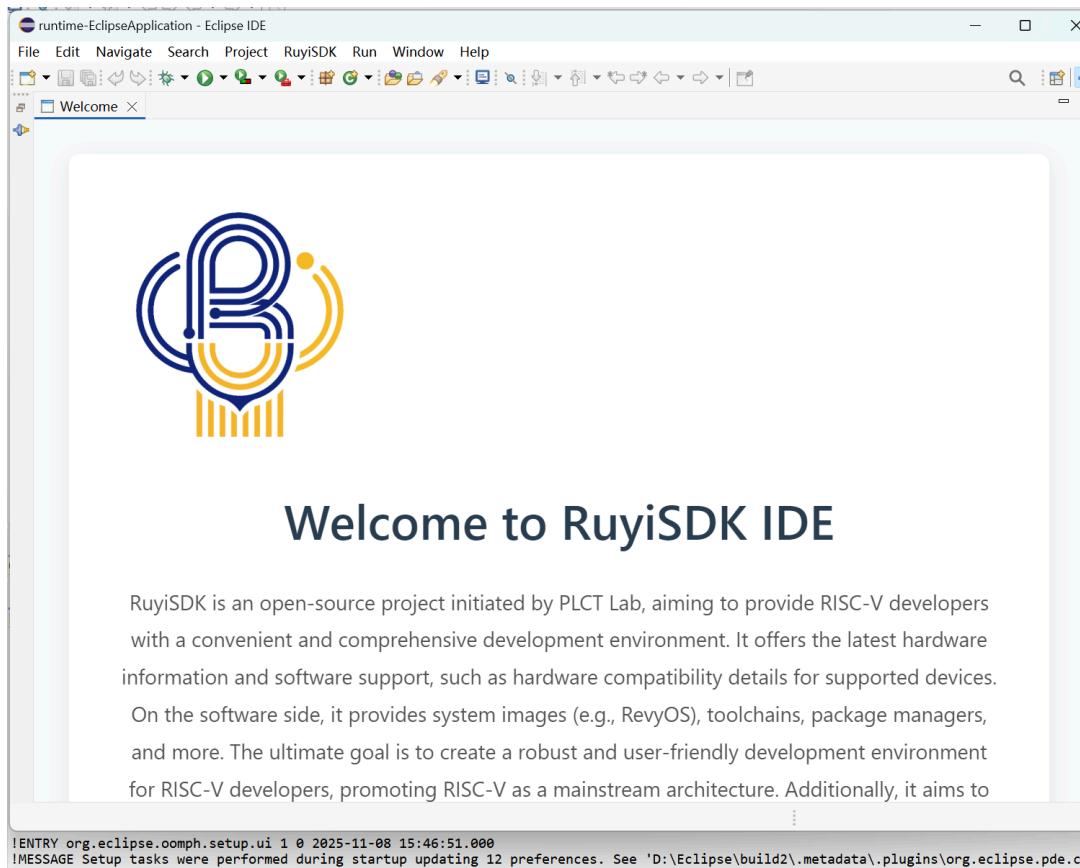

- 右键点击任意一个插件项目 (如 `org.ruyisdk.core`)
- 选择 `Debug As → Eclipse Application`

- 完成：

## 方法二：自定义启动配置

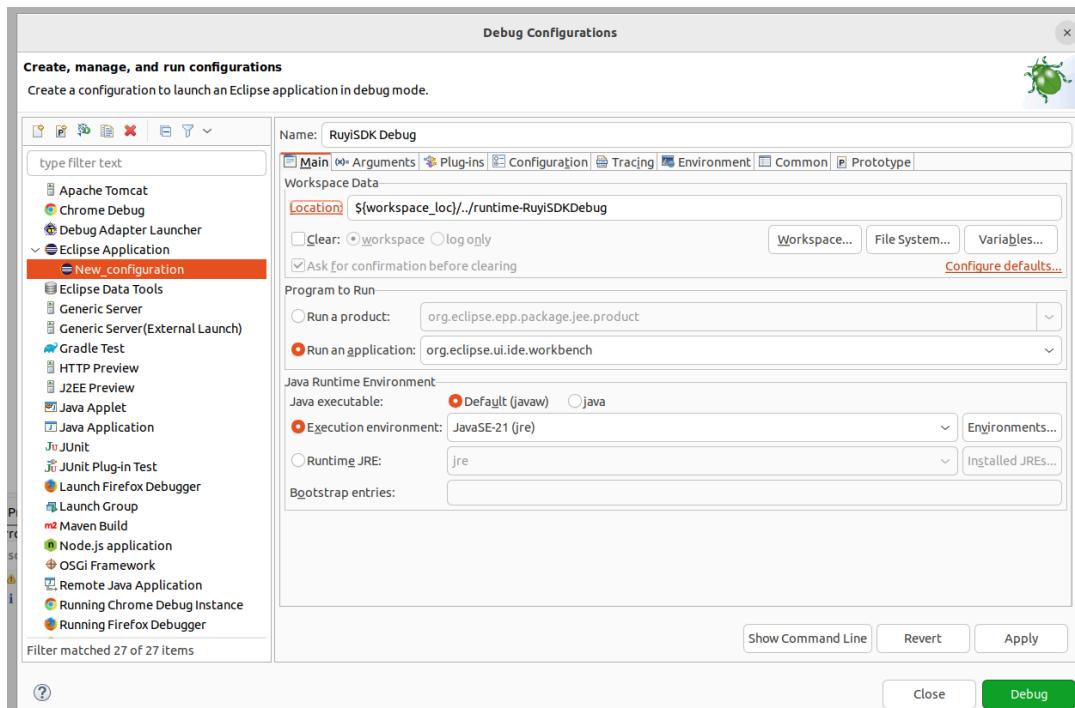

导入参考方法一，是一样的

### 1. 打开运行配置

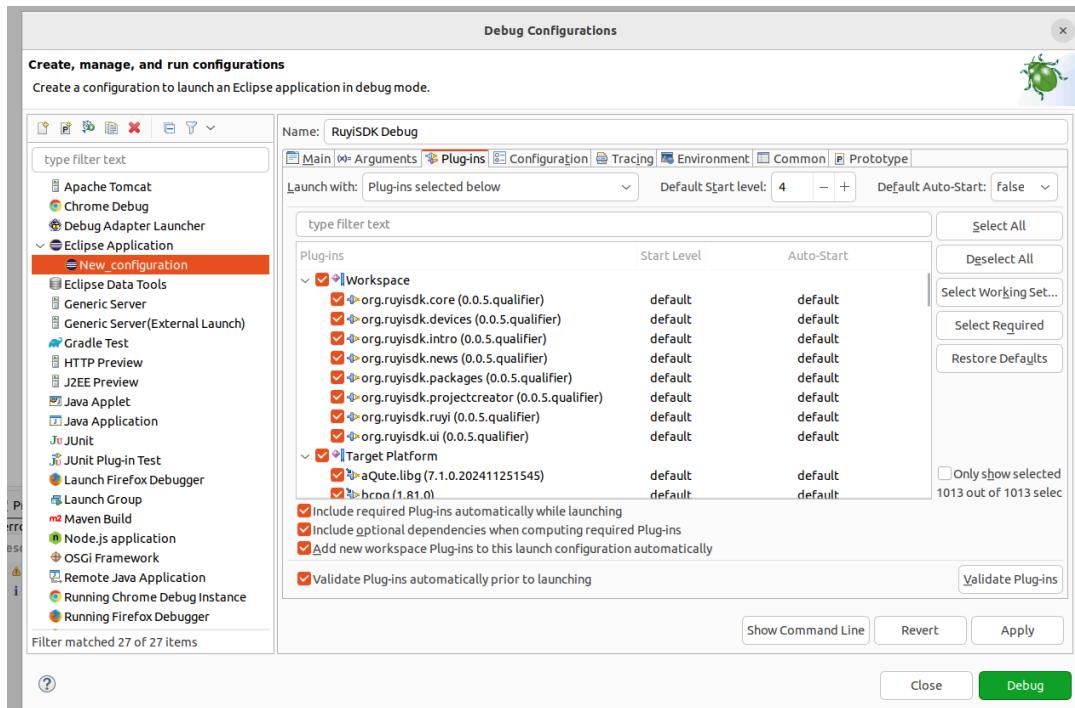

- `Run → Debug Configurations...`
- 双击 `Eclipse Application` 创建新配置

### 2. 配置参数-参照上图

- **Name:** 给配置起个名字，如 "RuyiSDK Debug"
- **Main 标签页:**
  - Program to Run: `Run an application: org.eclipse.ui.ide.workbench`

- **Plug-ins** 标签页：

- 选择 `Launch with: plug-ins selected below`
- 点击 (可选) `Include Required Plug-ins ...` 自动添加依赖
- 确保您的所有 `org.ruyisdk.*` 插件都被选中

### 3. 启动调试

- 点击 `Debug` 按钮
- 新的 Eclipse 实例将以调试模式启动
